

LAB 4-11 CREATING YOUR OWN POLICIES IN SERVER

You are going to create 10 new policies on your domain that are OTHER than the ones we've done up to this point. Do this in **Server 2008**.

Check off

	Decided on policies as a group
	Created an OU named N00bs
	Create N00by D00by N00b
	Create a new GPO on that OU named "N00b Policy"
	Applied the policies
	Logged into your workstation as N00by D00by N00b
	Tested that the policies worked.
	Answer questions

Before starting you're going to follow best practices.

1. Get together as a group and decide what you want n00bs to be able to do and NOT be able to do.
2. Look up the policies! Google it. Microsoft has an entire list of policies.
3. Create a new OU named N00BS.
4. Create a new user named **N00by D00by N00b**
5. Create a new GPO on that OU named N00B Policy.
6. Apply the policies you've chosen. Get creative! You can use GPOs to do a TON of things, including push software installation, select themes, apply wallpapers, etc.
7. Fill out the table below. Trust me on this one. It's so easy to "lose" your policies!

Policy We Defined	Where it's Found	Why we defined it	What it does
